Professional Summary

Software Quality Assurance Engineer and Computer Engineer with **1 year of professional experience at NeuroOcean AI**, specializing in software testing, API testing, database validation, automation, performance testing, and AI/ML-powered application testing. Experienced in requirement analysis, test case design and execution, regression testing, exploratory testing, defect reporting, retesting, and end-to-end validation. Hands-on experience testing **AI/LLM-powered applications and OpenAI API integrations**, with knowledge of prompt engineering, RAG, LangChain, LangGraph, and AI workflow automation. Strong understanding of quality assurance practices across web applications, REST APIs, backend systems, and databases, with experience collaborating closely with development and product teams in dynamic environments.

Professional Experience

SOFTWARE QUALITY ASSURANCE ENGINEER, *NeuroOcean AI Lahore, Pakistan*

01/2026 – Present
Lahore

- Design, maintain, and execute test cases based on requirements, acceptance criteria, and business workflows.
- Perform **functional, regression, smoke, sanity, exploratory, UI/UX, API, database, security, load, and end-to-end testing**.
- Analyze requirements to identify functional, integration, usability, and data-quality risks.
- Test REST APIs using **Postman and Swagger**, validating requests, responses, authentication, error handling, and business logic.
- Validate backend data and business rules using **PostgreSQL and pgAdmin4**.
- Conduct load and performance testing using **Apache JMeter** under different concurrent-user scenarios.
- Perform test automation using **Katalon Studio and Selenium IDE** for functional and regression scenarios.
- Test AI-powered features and **LLM-based applications**, including OpenAI API integrations.
- Apply prompt engineering and AI workflows when validating AI-powered functionality.
- Report, track, reproduce, and retest defects with clear steps, expected/actual results, and supporting evidence.
- Validate role-based access, frontend/backend integration, data consistency, and business workflows.
- Collaborate with developers and product teams to investigate defects, clarify requirements, and improve product quality.

ML & AI INTERN, *NeuroOcean AI*

10/2025 – 12/2025
Lahore, Pakistan

- Worked on real-world AI automation, backend APIs, and LLM-powered systems.
- Contributed to production projects involving OpenAI APIs, FastAPI, PostgreSQL, and workflow automation.
- Performed API testing, backend debugging, database validation, and system reliability checks.
- Collaborated with development teams to improve product performance and user experience.

Educational Qualifications

Bachelor of Science in Computer Engineering,
University of Engineering & Technology, Taxila

2021 – 2025
Taxila, Pakistan

FSc. Pre-Engineering, *Degree College Zafarwal*

2019 – 2021
Zafarwal, Pakistan

Matriculation, *Muslim Model High School Zafarwal*

2017 – 2019
Zafarwal, Pakistan

Technical Skills

Software Testing

Functional Testing • Regression Testing • Smoke Testing • Sanity Testing • Exploratory Testing • Black-box Testing • UI/UX Testing • End-to-End Testing • API Testing • Database Testing • Security Testing • Load & Performance Testing • Test Case Design & Execution • Defect Reporting • Retesting & Validation

PROGRAMMING & BACKEND

Python • FastAPI • SQLAlchemy • SQL • JWT Authentication • Git • GitHub

API & DATABASE

Postman • Swagger • REST APIs • PostgreSQL • SQL • pgAdmin4

TEST AUTOMATION & PERFORMANCE

Katalon Studio v11 • Selenium IDE • Apache JMeter • Chrome DevTools • OWASP ZAP

AI/ML & LLM

OpenAI API • LLM Applications • Prompt Engineering • LangChain • LangGraph • Retrieval-Augmented Generation (RAG) • AI-powered Application Testing • n8n Workflow Automation

Key Projects:

FLIT — AI-POWERED RECRUITMENT PLATFORM

- Analyzed functional and non-functional requirements and designed test cases for end-to-end recruitment workflows.
- Tested registration, profile creation, CV generation, job posting, candidate management, hiring, and interview scheduling.
- Tested AI-powered **CV generation and job recommendation** features.
- Performed functional, regression, smoke, exploratory, API, database, and role-based access testing.
- Validated data integrity across frontend, backend, API, and database layers.
- Reported, reproduced, tracked, and retested defects.

THRYVE — HEALTHCARE MANAGEMENT PLATFORM

- Tested **Admin, Provider, Phlebotomist, and Patient** modules.
- Performed functional, regression, smoke, sanity, API, database, UI/UX, and end-to-end testing.
- Validated patient registration, appointments, subscriptions, consultations, laboratory, messaging, notifications, and document workflows.
- Tested role-based permissions and frontend/backend integration.
- Collaborated with developers and product teams to identify and resolve defects.

LIFEWEAVER — AI-POWERED PLATFORM

- Performed QA for an AI-powered application across core functional and integration workflows.
- Tested AI/LLM functionality and backend API integrations.
- Validated integrations with **WhatsApp, Gmail, and Calendar**.
- Executed API, database, functional, and end-to-end test scenarios.
- Identified, documented, and retested defects to improve system reliability and user experience.
